Progress Report

Starting to search about the project more and completing the previous proposal.

We have commenced our project, adhering to schedule 1, which outlines the process for data collection. To procure the necessary data, we have explored two distinct methods: a paid approach and a free alternative. Both avenues require thorough examination to determine their suitability for our specific needs.

Upon resolving any issues related to data collection, we will proceed to the critical stage of data preprocessing. This step involves cleaning and refining the gathered information, ensuring that it is in an appropriate format for analysis. By thoroughly preparing the data, we aim to eliminate any inconsistencies, missing values, or outliers that could affect the accuracy of our results.

As we progress beyond data cleansing, we will delve into other timelines, each representing essential milestones in our project. These will include model definition and implementation, model training, validation, and evaluation, as well as the subsequent comparative analysis and interpretation of results.
